

The Gasification Map 2012

The Gasification Map 2012 displays the locations of over 250 commercial scale gasification plants worldwide, which are either in operation or under construction. Information supplied for each plant is feedstock type, technology, number and size of gasifiers, end products. Each plant is labelled with an ID number and, where possible, this corresponds to the databases of the Gasification Technologies Council (www.gasification.org) and the US Department of Energy National Energy Technology Laboratory (www.netl.doe.gov/technologies/coalpower/gasification/worldsdatabase/index.html). The map, however, contains many plants not yet recorded in those databases. All gasifier sizes are given in MW_{th} of syngas output. Approximate conversion factors are provided for feedstocks and products.

Print copies of the map may be ordered from Higman Consulting GmbH. Contact map@higman.de.

Prices are :

A1 (594 x 841mm) US\$ 120.00

A0 (841 x 1189 mm) US\$ 150.00

plus postage and packing.
